

AHMAD RIFAI

Game Developer (Unity/C#) - Mobile Games - 10+ Years

Sidoarjo, Indonesia (UTC+7) | arifai.dev@gmail.com | github.com/rifai | linkedin.com/in/ahmad-rifai-66b05973 | rifai.id

Summary

Game Developer (Unity/C#) with 10+ years building mobile games and gameplay systems, most recently as main gameplay programmer on 5 live casual and hybrid-casual titles for Android and iOS. Strong in C#, object-oriented programming, and SOLID-based game architecture, with hands-on performance optimization that raised the crash-free rate above 98%. Experienced implementing gameplay features, UI, and animations, and integrating Firebase, AdMob, Unity Ads, and Addressables. Works in Git-based team workflows, participates in code reviews, and mentors junior developers.

Skills

Game Development: Unity, C#, Object-Oriented Programming (OOP), SOLID, game architecture, gameplay systems, UI, animations, performance optimization

Mobile & Integrations: Android, iOS, Firebase (analytics & crash reporting), AdMob, Unity Ads, RESTful APIs

Unity Libraries & Tools: Addressables, DOTween, Animator, Zenject, custom Unity Editor tools

Workflow: Git, GitHub Actions, code reviews, mentoring, Claude Code, GitHub Copilot

Other Engines & Languages: Godot (GDScript), C/C++, Java, Kotlin, Python

Experience

Abersoft Studio - Game Programmer

Feb 2024 - Jul 2026

Main gameplay programmer for Unity casual and hybrid-casual mobile games on Android and iOS, from prototype to release.

- Optimized game performance across 5 live Android and iOS titles, including Canvas redraw efficiency, improving frame stability and raising the crash-free rate above 98%.
- Implemented gameplay features, UI animations, and player feedback with DOTween and Animator; used Zenject for dependency injection and Addressables for asset management.
- Architected and refactored legacy game systems using OOP and SOLID principles, improving maintainability and extensibility across live titles.
- Integrated and maintained Firebase (analytics and crash reporting), AdMob, and Unity Ads for monetization and live-game quality monitoring.
- Participated in code reviews and mentored junior developers on architecture, coding standards, and best practices.
- Built custom Unity Editor tools for managing shop items and character dialogue, and a GitHub Actions workflow that automates Android APK builds.
- Titles: Bubble Tanks - Idle Defense, Cat Life World: Build a story, Influencer Girl Hollywood Life, Geometry Tank - Dash Adventure, Monkey King: Legend of Heroes.

Crescentyr - Game Programmer, Part-time

Oct 2014 - Present

- Shipped 6 curriculum-focused Unity (C#) games for the Legends of Learning platform; currently building new titles in Godot.
- Delivered licensed games with Rovio (Angry Birds Eggstraction) and ZeptoLab (Cut the Rope: Forces and Motion), implementing physics-based gameplay around forces, motion, and collisions.
- Optimized web build size from over 40 MB to under 10 MB and automated Unity and Godot web builds with GitHub Actions.

Mojiken Studio - Game Programmer

Feb 2016 - Jan 2018

- Developed core gameplay features and mechanics for She and the Light Bearer in Unity (C#) and Fungus; shipped on Steam via Toge Productions with a "Very Positive" player rating.

Independent / Dolanan Studio - Game Developer

2013 - 2018

- Solo-developed Bolderline, a puzzle game for Android and HTML5 (Urho3D, C++, Java/JNI), covering mechanics, UI, level design, testing, and Google Play Services integration.
- Programmed gameplay and third-party library integration for Garuda Nest Rescue, a Unity endless runner for Android.

Education

Institut Teknologi Sepuluh Nopember - B.Eng. in Software Engineering

2007 - 2011
